## Service Contract Reduces Bearing and Maintenance Cost

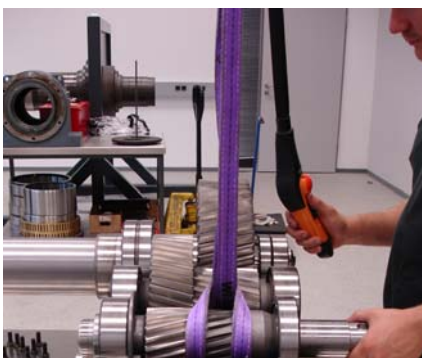

As part of a service contract Schaeffler Brazil monitors since 2008 all equipment at Votorantim Celulose e Papel (VCP), one of Brazil's biggest pulp producers. Thus, bearing and maintenance costs could be reduced by more than 1.5 million Euro. At the beginning of the cooperation Schaeffler and VCP agreed on numerous improvement topics. Beside condition measurements Schaeffler supports the customer for example with lubrication, oil analysis, reconditioning, static inspections, trainings and engineer consulting on-site. In addition to services, the customer also has access to Schaeffler Group's complete product range (bearings, tools and greases). In this way he profits by numerous services from a single source.

## Professional Dismounting and Mounting

When revising one of its calenders, Habasit, a manufacturer of power transmission and conveyor belts, profited by the support of the F'IS mounting and reconditioning service. The dismounting and mounting of the roll bearings was planned to be performed by experienced bearing fitters due to quality and safety reasons. First, the F'IS fitter in charge dismounted the old bearings and mounted the new ones. The subsequent inspection of the dismounted bearings showed that for some bearings reconditioning was economically reasonable. The revision was also done by F'IS. As Habasit wanted to stock a full set of calender bearings, the missing bearings were bought additionally. Thus, the company got a complete set of spare bearings at a very favorable price.

## F'IS Training Program 2010

The new F'IS training plan has been published. As in other years, F'IS offers again a wide range of trainings. The standard trainings cover the areas Bearing Technology and Condition Monitoring. Furthermore, customized trainings are offered. Those dates and contents are always agreed with the customer. The trainings consist of theoretical and practical parts. The standard trainings "Condition Monitoring" take place in Herzogenrath and the standard trainings "Bearing Technology" in the 2009 opened F'IS Training Center in Schweinfurt. On demand, trainings can also be held at the customer's site. An overview about the trainings and training dates is now available on the F'IS website.
